TradesOn Platform

Product Requirements Document

Delivery Target: Proof of Concept (PoC) → Web Application (MVP) → Native App (Beta)

1. Document Overview

This Product Requirements Document (PRD) defines the full functional scope of the TradesOn Platform — a marketplace connecting homeowners, property managers, and realtors with licensed and non-licensed trade service providers. It serves as the primary reference for engineering, design, and QA teams to build toward a Technical Design Document (TDD).

This PRD is structured to support a phased delivery model:

- Phase 0 — Feature Validation (PoC): The development of core functionality to test and display to beta testers
- Phase 1 — Web Application (MVP): A fully responsive web app that can go to market that delivers core functionality without requiring native mobile development. Prioritizes speed to market and enables early user validation.
- Phase 2 — Native Mobile App (Beta): Expands into a native iOS experience with capabilities not feasible in the browser, such as live GPS tracking, push notifications, and offline mode.

Field	Value
Product Name	TradesOn Platform
Document Version	1.0 — Draft
Status	In Review
Last Updated	March 17th, 2026

1.1 Product Vision

TradesOn is an AI-powered home services marketplace that eliminates the friction of finding, vetting, and hiring trade professionals. The platform serves multiple user roles — homeowners, property managers, realtors, and tradespeople — with role-specific workflows, AI-assisted job intake, automated compliance verification, and integrated payments.

1.2 User Roles

The platform serves five distinct user types, each with a tailored experience:

- Homeowner — Creates and manages home repair/service jobs; hires tradespeople.
- Property Manager — Manages multiple properties; assigns and oversees jobs at scale.
- Realtor — Coordinates service work for buyer/seller transactions; may be managed under a Brokerage account.
- Licensed Tradesperson — Verified professional with state credentials; browses and bids on jobs.
- Non-Licensed Tradesperson — General service provider; undergoes identity and document verification.
- Platform Admin — Internal staff managing compliance, user governance, and platform health.

2. Functional Requirements

Function 1 — Authentication & Account Management

Handles user registration, login, and session management. All roles access the platform through a shared authentication gateway that routes users to their role-specific experience post-login.

Workflow

1. User lands on the Login Page and enters credentials (email + password).
2. If the user does not have an account, they are directed to the Account Creation flow.
3. Upon successful registration, the user proceeds to Role Selection (Screen 3) which routes them to the appropriate onboarding flow.
4. Returning users are authenticated and directed to their role-specific dashboard.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-01	Login	Email + password fields; 'Forgot Password' link; redirect to Account Creation; form validation with inline error states.
S-02	Account Creation	Name, email, password fields; user role selection (dropdown or card selector); terms acceptance; email verification trigger on submit.

Function 2 — Onboarding & Identity Verification (API)

Each user role has a distinct onboarding flow that collects role-appropriate information, payment details, and identity documentation. Tradesperson onboarding includes AI-assisted document verification via a Compliance Agent.

Workflow — Tradesperson Onboarding (Licensed & Non-Licensed)

5. The provider begins registration and selects their trade role.
6. Completes a Trades Profile: personal details, trade categories, and service radius (drawn on an interactive map).
7. Uploads required documents: government-issued ID, professional license (licensed only), and proof of insurance.
8. Compliance workflow activates and begins automated verification:
    - ID Verification API validates identity.
    - License Verification checks professional credentials against state databases.
    - Insurance Validation confirms coverage type, limits, and policy expiration.
9. If any document fails verification, the provider is notified and prompted to resubmit corrected documentation.
10. Upon successful verification, a Verified Badge is assigned and access to the Job Board is granted.

Workflow — Customer Roles (Homeowner, Property Manager, Realtor)

11. User selects their role on the User Type Selection screen.
12. Completes role-specific profile form.
13. Sets up a payment method via the integrated payment processor.
14. Completes identity verification
15. Account activated and the user is redirected to their role-specific dashboard.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-03	User Type Selection	Card-based selection UI for role: Homeowner, Property Manager, Realtor, Licensed Trade, Non-Licensed Trade. Routes user to the appropriate onboarding form.
S-04	Property Manager Onboarding	Profile form; payment method setup (Stripe); identity verification flow; property portfolio details (number of units, locations).
S-05	Realtor Onboarding	Profile form; NAR/MLS license number; payment setup; identity verification; optional brokerage association.
S-06	Homeowner Onboarding	Profile form; home address(es); payment method setup; identity verification.
S-07	Licensed Trade Onboarding	Profile form; trade category multi-select; license number + document upload; insurance document upload; service radius map; availability calendar setup; identity verification.

S-08	Non-Licensed Trade Onboarding	Profile form; trade category multi-select; ID upload; insurance upload (if applicable); service radius map; availability calendar setup; identity verification.

Function 3 — Brokerage Management

Enables real estate brokerages to provision a centralized account structure, manage realtor seats, configure billing, and administer user permissions at scale.

Workflow

16. Admin selects 'Realtor Brokerage' account type and enters brokerage details: name, license number, address, and estimated seat count.
17. Creates the primary admin account with full credentials and contact information.
18. Sets admin permissions: user management, billing access, analytics access.
19. Selects a brokerage plan (seat-based or usage-based) from available options.
20. Configures centralized billing method and invoicing preferences.
21. Reviews and confirms all brokerage information before provisioning.
22. Platform provisions the account hierarchy — brokerage account with nested realtor seats.
23. Admin accesses the Admin Dashboard to begin adding realtors and managing the brokerage.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-09	Brokerage Setup	Brokerage selection form; fields for name, license number, physical address, estimated realtor count.
S-10	Admin Permissions	Toggle-based permission matrix: user management, billing access, analytics, job visibility. Confirmation required before applying.
S-11	Plan Selection	Side-by-side plan comparison (seat-based vs. usage-based); estimated cost calculator; selection CTA.
S-12	Billing Configuration	Payment method entry; invoice delivery preferences (email, PDF); billing contact; tax information.
S-13	Review & Confirm	Summary of all brokerage setup details with edit links per section; final submit action.
S-14	User Management	Account hierarchy tree view; add/remove realtors; assign seat licenses; bulk invite via CSV upload.
S-15	Brokerage Admin Dashboard	Overview of active realtors, open jobs, billing summary, and recent activity feed.
S-16	Brokerage Billing	Invoice history; current plan details; payment method management; upgrade/downgrade options.

Function 4 — Admin Portal

An internal-facing control center for platform administrators to review compliance submissions, monitor account health, resolve disputes, and track platform-level metrics.

4.1 Governance & Compliance Review

Admins review verification submissions from tradespeople and make approval decisions.

24. Review submitted documents: government ID, professional license, insurance certificate.
25. Cross-reference license numbers against state databases.
26. Validate insurance policy coverage, limits, and expiration dates.
27. Add internal admin notes to the review record.
28. Make a decision:
    - Approve → Account is activated and Verified Badge is assigned.
    - Reject → User is notified with a reason; account remains inactive.
    - Request More Documents → User is notified with specific instructions.

4.2 Account Monitoring & Flag Detection

The system automatically surfaces accounts that require admin attention based on behavioral and status signals:

- Open payment disputes or failed chargebacks.
- Consistently poor service reviews (below threshold).
- Expired insurance certificates.
- Suspicious activity patterns (e.g., multiple failed logins, unusual job volume).

4.3 Admin Resolutions

Admins have a structured set of resolution actions available for flagged accounts:

- Send a formal warning with required acknowledgment.
- Request a written explanation from the user.
- Issue a temporary account suspension with a defined reinstatement date.
- Issue a permanent account deactivation with documented reason.

4.4 Audit Log

All admin actions are immutably logged to support accountability, audits, and dispute resolution. Each log entry captures: action type, acting admin user, target account, timestamp, and documented reason.

4.5 Platform Metrics Dashboard

Aggregated platform health metrics available in real time to admins. Core metrics include:

- Total Registered Users (by role)
- Monthly Active Users (MAU) — overall and by role

- Active Jobs — open, in-progress, and completed
- Gross Revenue and Net Revenue (after platform fee)
- Operational Expenses

4.6 Funnel & Behavioral Metrics

Funnel and behavioral tracking to support growth decisions:

- Customer acquisition funnel: visit → sign-up → onboarded → first job created.
- Tradesperson acquisition funnel: sign-up → verified → first bid submitted → first job won.
- Supply/demand ratio monitoring by ZIP code and trade category.
- Activation rate tracking with automated email triggers for inactive users.
- Dynamic tradesperson recruitment pausing when supply exceeds demand in a region.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-17	Compliance Review	Document viewer (ID, license, insurance); cross-reference status indicators; admin notes field; Approve / Reject / Request More actions.
S-18	Account Monitoring	Flagged accounts list with flag type and severity; filter by flag category; link to account profile and job history.
S-19	Admin Resolutions	Resolution action panel per flagged account; action history log; escalation path; status tracker.
S-20	Audit Log	Timestamped, searchable log of all admin actions; filterable by admin user, account, action type, and date range; export to CSV.
S-21	Core Metrics Dashboard	KPI cards: Total Users, MAU, Active Jobs, Revenue, Expenses; trend charts; date range filter.
S-22	Funnel Tracking	Conversion funnel visualizations for customer and tradesperson acquisition paths; stage drop-off rates.
S-23	Behavioral Metrics	Activation rate chart; supply/demand heat map by region; automated email trigger log; recruitment pause controls.

Function 5 — Role-Specific Dashboards

Each user role accesses a personalized dashboard that surfaces the most relevant data and actions for their workflow.

Tradesperson Dashboard

- Active and upcoming job assignments with status indicators.
- Pending quotes submitted awaiting customer selection.
- Earnings summary: current period, pending payout, lifetime.

- Verification status and document expiration alerts.
- Availability calendar quick-access.

Realtor Dashboard

- Client portfolio overview with active jobs per client.
- Job status tracker across all managed properties.
- Quote history and payment records.
- Brokerage assignment and plan details (if applicable).

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-24	Tradesperson Dashboard	Job list (active, pending, completed); earnings summary; quote activity; availability calendar shortcut; verification status badge.
S-25	Realtor Dashboard	Client list with active jobs; job status summary cards; payment history; brokerage plan info; quick-create job CTA.

Function 6 — Job Creation (AI Intake)

The AI Intake system allows customers to describe a home service need via photo, voice, or text. An AI Intake Agent processes the input, classifies the job, scores urgency/severity, generates a preliminary cost estimate, and drafts a job summary for user confirmation.

Workflow

29. User initiates a new job by selecting 'Create New Job.'
30. User submits input via one or more channels: photo upload, voice recording, or free-text description.
    a. Create a uniform form structure:Room
    b. Type of Trade needed: Plumbing, electrical, etc.
    c. Severity
    d. Description Box
31. User selects the trade classification from a structured category list.
32. Enforce required inputs to validate that all required inputs are present.
33. MVP - NLP and computer vision models analyze the input to extract issue details.
34. MVP - Severity and urgency scoring is calculated; additional inputs are requested if confidence is insufficient.
35. MVP - A preliminary cost range is generated based on trade type, severity, and regional pricing data.
36. MVP - The AI drafts a structured job summary (issue description, trade category, severity, cost range).
37. The user reviews the summary, edits if needed, and approves.
38. Approved jobs are routed to the Job Board.

MVP - AI Agent Validation Logic

- Flag jobs where photo quality is insufficient (blurry, dark, or irrelevant subject) and prompt for re-upload.
- Flag jobs where the described issue does not align with the selected trade category and surface a correction prompt.
- Request additional detail if severity cannot be confidently scored from the initial input.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-26	Job Input Form	Trade category selector; issue type picker; text description field; photo attachment (multi-image); optional voice input; form validation.
S-27	MVP - AI Analysis View	Processing animation; AI-generated job summary preview; severity/urgency score display; preliminary cost range; flags for missing or low-quality inputs.
S-28	User Confirmation	Editable summary fields; cost range confirmation; 'Approve & Post to Job Board' CTA; 'Edit Job' CTA.

Function 7 — Job Board & Quoting

Approved jobs are posted to a filterable Job Board where verified tradespeople can discover, review, and submit quotes. Customers review all submitted quotes and select the best fit. Jobs expire if no quote is accepted within a defined window.

Workflow

39. Approved job is entered into the Job Board routing system with a status of 'Open.'
40. Tradespeople filter the board by distance (5 / 10 / 25 miles) and sort by newest, closest, or soonest-expiring.
41. A tradesperson reviews the full job summary and submits a quote (price + message).
42. Multiple tradespeople can submit quotes simultaneously (unlimited quote system).
43. Customer receives notification of new quotes and reviews them in a comparison view.
44. Customer selects one quote or allows the job to expire.
    - Quote Accepted → Job assigned; move to Scheduling.
    - Job Expired or All Quotes Declined → Customer must resubmit or cancel the job.

Job Expiration Rules

Open Design Decision: Expiration window to be defined (recommended starting point: 72 hours from posting). Expired jobs are archived and not re-posted automatically — customer must take explicit action.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-29	Job Board (Tradesperson View)	Filterable list of open jobs; filters: distance radius, trade category, posted date; sort: newest / closest / expiring soon; job card with summary, distance, and time remaining.
S-30	Job Detail & Drilldown	Full job summary; AI-generated severity score and cost range; customer location (approximate); photo attachments; 'Submit Quote' CTA.
S-31	Quote Submission	Price input field; cover message text area; estimated completion time; service guarantee statement; submission confirmation.
S-32	Quote Review (Customer View)	All submitted quotes displayed as comparable cards: price, message, tradesperson profile link, rating, distance; 'Accept Quote' CTA per card; job expiration countdown.

Function 8 — Scheduling

Once a quote is accepted, the platform facilitates scheduling coordination between the customer and the tradesperson. Pre-authorization of payment is captured before the appointment is confirmed.

Workflow

45. Job acceptance triggers the scheduling flow; tradesperson's available time slots are surfaced to the customer.
46. Customer selects 2–3 preferred time slots.
47. Customer submits their time slot preferences.
48. Tradesperson reviews options and selects the time that works best.
49. Appointment is confirmed and both parties receive notification.
50. Platform requests a payment pre-authorization (hold) for the quoted amount
51. Customer authorizes the payment hold; funds are reserved but not captured.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-33	Tradesperson Availability Manager	Calendar interface for tradespeople to set and update weekly availability; recurring availability blocks; exception dates (unavailable days).
S-34	Customer Time Slot Selection	Calendar view showing tradesperson's available windows; customer selects up to 3 preferred slots; confirmation submit.
S-35	Pre-Job Checklist (Tradesperson)	Auto-generated checklist based on job type and AI summary; checklist items to complete before arriving onsite; downloadable/printable.
S-36	Day-Of Job Route View	Map with optimized route to job location; ETA display; contact customer button; 'Mark En Route' CTA.

Function 9 — Job Execution

Covers the end-to-end execution lifecycle: tradesperson traveling to the site, performing the work, handling scope changes, and completing the job for customer approval.

Workflow

52. Job status updates to 'En Route' and live location tracking activates.
53. Real-time map and ETA are displayed to the customer.
54. On arrival, tradesperson marks 'Onsite' — live tracking ends and work begins.
55. Tradesperson conducts an initial inspection to assess actual scope vs. quoted scope.
56. If additional work is required:
    - Tradesperson submits an additional work scope with description, photos, and revised pricing.
    - Customer receives a notification and can accept or decline.
    - If declined, work proceeds under the original quote (no job cancellation).
    - If accepted, the total quoted amount is updated and logged.
57. Work proceeds ('In Progress' status).
58. Tradesperson marks work as 'Complete' and submits completion documentation.
59. Customer reviews the work and approves; payment capture is triggered.

Scope Change Rules

- Additional work requests are non-blocking — the job continues under the original scope if declined.
- All quote adjustments (additions and declines) are logged chronologically in the Quote History Log.
- Customers cannot cancel a job mid-execution due to a scope change request.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-37	Live Tracking View (Customer)	Real-time map showing tradesperson location; ETA countdown; 'En Route' status badge; contact button; auto-dismisses on arrival.
S-38	Onsite Adjustment Panel	Additional work description field; photo attachment; manual price input; scope change history log; 'Submit for Approval' CTA.
S-39	Scope Change Approval (Customer)	New scope summary with photos; original quote vs. updated total; 'Accept' and 'Decline' actions; non-blocking — original work continues either way.

Function 10 — Job Completion & Invoicing

After the customer approves the completed work, the platform generates a detailed invoice, processes payment, and closes the job record.

Workflow

60. Tradesperson marks the job as 'Complete' in the platform.
61. Tradesperson uploads completion photos and adds notes summarizing work performed.
62. System calculates invoice line items: labor, materials, and any approved scope additions.
63. A PDF invoice is automatically generated and delivered to the customer via email and SMS with a payment link.
64. Customer reviews and approves the invoice in-app.
65. Payment is captured from the pre-authorized hold. Platform fee is applied.
66. Job status updates to 'Closed.' Both parties can leave a review.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-40	Completion Submission (Tradesperson)	Job completion declaration form; completion photo upload (required, minimum 1 photo); completion notes text area; 'Mark Complete' CTA.
S-41	Completion Documentation	Photo gallery viewer; completion notes display; work summary timeline; option to add additional notes before submitting invoice.
S-42	Invoice Line Items	Labor, materials, and additional work line items with quantities and unit costs; auto-calculated subtotal, platform fee, and total.
S-43	PDF Invoice Preview	Rendered invoice preview; download button; re-send to customer action; line item edit (pre-submission only).
S-44	Customer Invoice Approval	Invoice summary with itemized breakdown; 'Approve & Pay' CTA; option to flag a dispute; payment confirmation screen post-capture.

Function 11 — Payments & Payouts

Manages all payment flows on the platform: customer payment methods, tradesperson payout configuration, pre-authorization, capture, and job cancellation handling.

Platform Payment Model

- Customers are charged via pre-authorized PaymentIntents — funds are held at quote acceptance and captured upon job approval.
- Tradespeople receive payouts via Stripe Connect (or equivalent) on a configurable schedule (daily, weekly).
- A platform fee is applied to each completed transaction (percentage TBD by business).
- Disputed charges are surfaced in the Admin Portal for resolution.

Cancellation Policy

Job cancellation rules are designed to protect both parties. Open Design Decision: Specific fee structure TBD (e.g., free cancellation before tradesperson accepts; partial fee if cancelled after scheduling; tradesperson cancellation penalties). Cancellation can be initiated by either party and is handled within the platform.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-45	Customer Payment Method	Card entry ; saved payment methods management; default method selection; billing address.
S-46	Tradesperson Payout Setup	Payment connected to onboarding (bank account / debit card); payout schedule selection; payout history and balance view.
S-47	Job Cancellation	Cancellation initiation with required reason; cancellation policy summary; fee disclosure (if applicable); confirmation.

Function 12 — Customer Support

Provides in-platform communication channels for users to report issues, provide feedback, and track the status of support requests.

Screen Inventory

Screen #	Screen Name	Description / Key Requirements
S-48	Support Contact Form	Issue category selector; free-text description; optional screenshot attachment; contact preference (email / in-app); submit CTA.
S-49	Support Ticket Tracker	List of open and resolved tickets; status badges (Open, In Progress, Resolved); ticket detail view with message thread; ability to add follow-up messages.

4. Master Screen Index

Complete reference list of all screens defined in this PRD, cross-referenced by function and delivery tier.

Screen	Screen Name	Function
